Re: Waiver – Dynamic Balancing without the bushing

We have received your order # _____ for _____, a sheave to be dynamically balanced (two planes or one plane balancing). Baldor cannot guarantee accuracy of balancing if the bushing is not installed on the sheave during the balancing process.

This waiver serves as a disclaimer that Baldor will not be held responsible for vibrations that may result from the fact that the bushing to be used is not included in your order and will not be the one used to balance this sheave.
